

"TWO-HANDLED SHOVEL"

ABSTRACT

The present invention is concerned with a two-handled shovel for use in lifting
5 or moving heavy loads, such as snow. The present invention comprises a snow shovel
having a second handle assembly pivotally attached to the blade of the shovel. The
assembly is an inverted U-shaped element having two legs and a handle grip. Each
handle of the shovel has a rotatable hand grip that allows a person to keep their wrists
stationary when lifting or moving snow. The second handle assembly further
10 comprises means for adjusting the length of the legs to suit the person using the
shovel.
